

## Industrial Maintenance Mechanic

**This position requires the ability to troubleshoot, repair and maintain production machines and equipment. Perform the day-to-day inspections, maintenance, and repairs of plant equipment.**

- Troubleshoot and complete maintenance tasks ranging from simple to very complex mechanical, pneumatic, vacuum, and electrical systems.
- Read and interpret equipment manuals, procedures and other specifications to determine the repair method on failed components.
- Follow established procedures to execute preventative and predictive maintenance as required, including test equipment for calibration.
- Must have the ability to work independently as well as in a team environment.
- Correctly and accurately complete required paper work, correctly documenting all maintenance actions, parts and times.
- Ability to prioritize daily work load and maintenance requirements based on safety, defined plans and schedules, quality and production requirements.
- Have thorough knowledge of the occupation hazards and corresponding safety precautions necessary for the safe performance of maintenance duties.
- Metal fabrication skills including welding, cutting and fitting
- PLC and VFD knowledge a plus
- Perform other job duties as assigned by Supervisor or Manager.
